

How Panzura Freedom Collaboration Dissolved Data Islands for ÅF

Since 1895, ÅF has connected technologies to provide profitable, innovative, and sustainable solutions for energy, industrial, and infrastructure markets. With almost 16,000+ highly qualified engineers and 28,000 partners, ÅF has assignments spanning across 100 offices and just as many countries. As a global operation, ÅF needed to ensure that their data was standardized and that a consolidated backup solution was in place. Enter Panzura Freedom Collaboration, which eliminated islands of storage, created data standardization, and provided a global view of ÅF's assets.

Challenge: Data silos and legacy point systems impact efficiency, performance

Prior to the implementation of Panzura, ÅF was using old, Windows-based point solutions. They used different backup applications at each site, and these sites had no visual representation of their data. With the generic, cheap storage blocks that were in place, ÅF found it difficult to standardize their data. Different solutions were being used at each site, making it so that the company had created islands of storage. These data islands made it virtually impossible for their 16,000+ employees to properly collaborate on projects across the globe. This led to a lack of efficiency, effectiveness, and a waste of funds.

Solution: Global data view with Panzura Freedom Collaboration

When searching for a solution, ÅF knew they needed something that would replace their islands of storage and legacy NAS products spread across their different sites. In order to fix this problem, they deployed Panzura Freedom Collaboration in March 2018 and piloted the product for five months before fully implementing the technology in September of that year. Soon after, the company was able to diminish their siloed islands of storage, creating a global view of their data and assets. How exactly?

Benefits: Real-time collaboration with increased efficiency, reduced latency

With Freedom Collaboration Filers, every site is provided local data center performance by using advanced algorithms to cache the data users need the most based on recency of creation and access. Additionally, administrators are able to choose the data they want to be pinned locally. This means that ÅF team members working on a project in Sweden can easily collaborate with engineers in China who

ÅF is a Swedish engineering and design company in the fields of energy, industry and infrastructure. Formed in 1895, it is one of the biggest consulting companies in Sweden.

Industry: Consulting services for energy, industry and infrastructure projects.

Employees: 16,000+

Customer Since: 2018

Cloud: Microsoft Azure

Partners: Microsoft

Competition: Talon

Panzura Product: Freedom Collaboration

Pain Points: ÅF needed to ensure their data was standardized and that they had a collaboration backup solution in place.

Panzura Solution: Eliminated islands of storage, created data standardization and provided a global view of ÅF's assets.

have the project files pinned locally at their site. This real-time collaboration reduces latency and increases efficiency so ÅF can readily work to make a difference for their clients.

“As a multi-billion-dollar global engineering and design firm with over 30,000 employees and partners worldwide, speed and team productivity are critical to delivering world-class billion-dollar designs for our customers. With Panzura Freedom, we deployed one global cloud file system across all global sites, enabling engineers and designers to collaborate as one global team, dramatically increasing productivity and improving our bottom line.”

Henrik Carlberg, Business CIO, ÅF

In addition to empowering the organization via global collaboration, ÅF's IT team can also sleep soundly knowing that the company's data is properly backed up. With Panzura Freedom Collaboration, 100% of unstructured data is stored in the cloud. Legacy NAS systems – like the ones ÅF was previously using – are costly to maintain when it comes to replication and backup. But with Freedom Collaboration, data is protected efficiently and utilizes the full spectrum of cloud durability. Freedom Collaboration even gives the company the power to immediately restore data from an entire file system down to an individual file.

Summary: ÅF drives greater productivity and business growth with Panzura

Since ÅF fully deployed Panzura Freedom Collaboration in September 2018, teams now enjoy greater productivity and standardization across the company. Now, employees can work simultaneously on projects without risking overwriting data, experiencing latency, or having to fear that their data is not being backed up properly. Thanks to Panzura Freedom Collaboration, ÅF can continue to efficiently create progress in the energy, industrial, and infrastructure space by providing sustainable solutions for tomorrow.

Discover how Panzura can benefit your company and help you manage your data with ease.

“Working alongside Panzura was as easy as it gets. It didn't take long for the Panzura team to demonstrate the value they can bring to a customer, especially with a cloud-strategy and a data-driven culture. Panzura's distributed file storage is a game-changer for any enterprise.”

Filip Åkesson, Principal Solution Specialist, Microsoft
